

## ABSTRACT OF THE DISCLOSURE

The present disclosure relates to a computer assisted system which enables a computer user to input data into a computer by using verbal utterances or voice. The present disclosure is more particularly directed to entering data into a computer, where the entered data is associated with a particular account. The present disclosure also relates to user enabled subroutines which are preferably enabled and implemented by voice. The present disclosure also relates to displaying and manipulating account information on a monitor and storing the information for later retrieval, review, and editing. The present disclosure also related to entering data into a computer by replaying a recorded voice.
